Revision 3

14/01/2019

You can NOT use this work in commercial purposes without written approval of author

NOTES:

STD16NF06 can be replaced by other FET in D-PAK:

STD30NF06

NTD20N06

STD20N06

ZXNM6A25K

IRLR2905Z

Ports marked as CLIM1-CLIM5 are reserved for current limiting/shutdown inputs. Note that ports of the 5-th channel are also used, so 5-th channel is sacrificed in favor of these inputs.

If not used, CLIMx inputs must be connected or pulled up to 5V. Low level at these inputs turn off corresponding channel.
